land capability districts 4-7)	inclusive. Further than 300 feet from the High Water Line of Lake Tahoe, maximum land coverage shall be 70 percent of the project area that is located within Land Capability Districts 4 through 7, inclusive. Also see Section 30.4 of the TRPA Code of Ordinances					

A. Reduced Minimum Lot Size and Dimensions. Smaller lots may be approved as part of a condominium, or other airspace subdivision pursuant to City Code 6.55.190.

B. Mixed-Use Density. The maximum density for mixed-use projects includes up to 40 Tourist Units per acre and up to 25 residential units per acre. If a project includes nonconforming tourist or residential density, any new tourist or residential density must take into account the overage in overall density and reduce the allowable density for new construction so that the total density does not exceed 65 units per acre.

In the case of a mixed-use project that includes a commercial use or other use that is not subject to a density calculation, combined with residential and/or tourist uses, the project may include the total allowable commercial square footage, and the maximum allowable tourist and residential units per acre, using the full parcel area as the denominator in the density calculation.

The maximum mixed-use density for TSC-G Special Area 1 is 40 units per acre. Otherwise, the lot and density standards for TSC-G Special Area 1 are identical to those in the TSC-G zoning district.

C. Density for APN 029-441-024. The maximum density for multi-family residential development on APN 029-441-024 is 4 units per acre.
