Tahoe Regional Trails Strategy

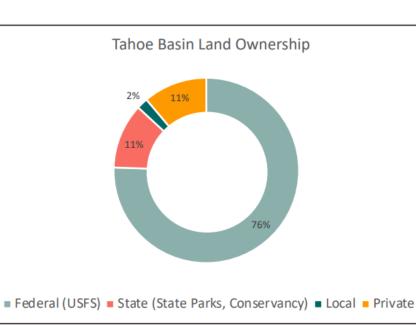

Governing Board 7/26/23

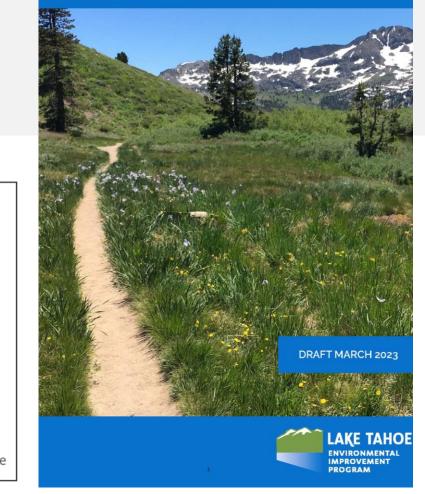

• • • • • • • • • • •

Why a Regional Trails Strategy?

- Shared long-term vision for trail network among all agencies
- Regional perspective to trail planning, building, & funding
- Build coordination between agencies to enhance implementation of priorities

TAHOE REGIONAL TRAILS STRATEGY

Regional Trails Strategy Partners

The strategy includes:

- Fifteen-year vision for a connected, highquality, and accessible regional trails network for Tahoe
- A list of environmental improvement projects that improve existing trails and trailheads, create new trail connectors, new trailheads, and decommission existing unsustainable trails
- A mapped inventory of trails and trailheads
- Funding options and strategies to implement the priority project list
- Recommendations for consistent signage between land managers

Environmental Review & Permitting

- Individual projects subject to standard environmental review
- Environmental review requirements dependent on state and jurisdiction

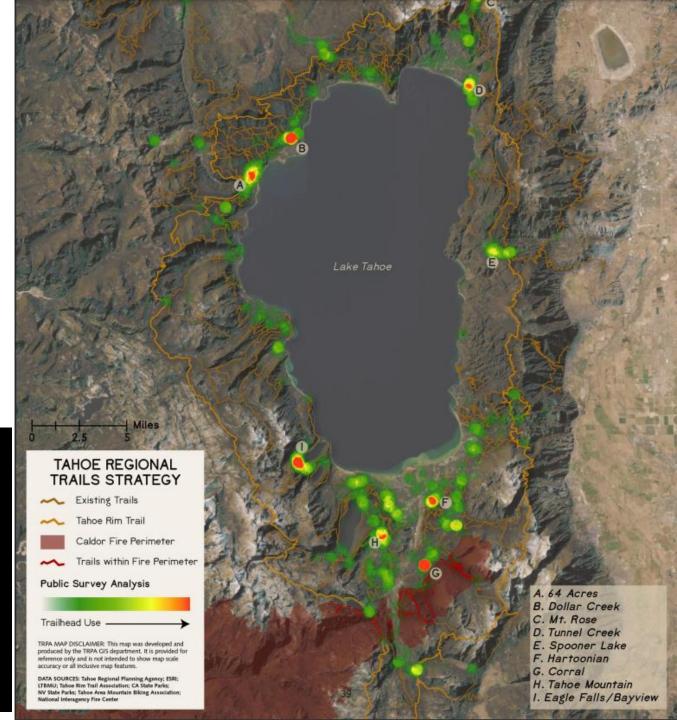

Data Collection & Public Outreach

- Mapped inventory of Tahoe's existing trails
- Stakeholders helped determine scope of strategy
- Public helped determine where improvements should be focused

Barriers to Accessing Trails (stakeholder assessment):

Goals of the Regional Trails Strategy

Project Screening

Projects were screened against strategy goals to determine which would provide the most benefit and be prioritized.

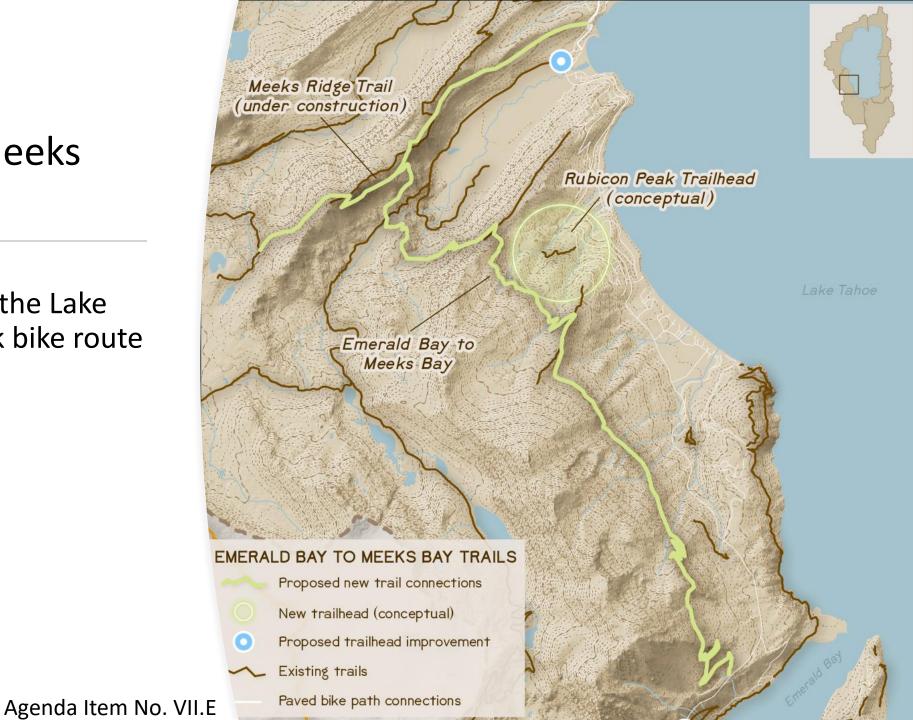

Goal	Score (1-3)
Environment	2
Equity	1
Connectivity	3
User Experience	3
Feasibility	2

Project Spotlight: Emerald Bay to Meeks Bay

Cornerstone section of the Lake Trail, a legal single-track bike route around Lake Tahoe

Project Spotlight: Maintenance Projects

Ongoing efforts to stabilize the slope and repair landslides that occur along the steep slopes.

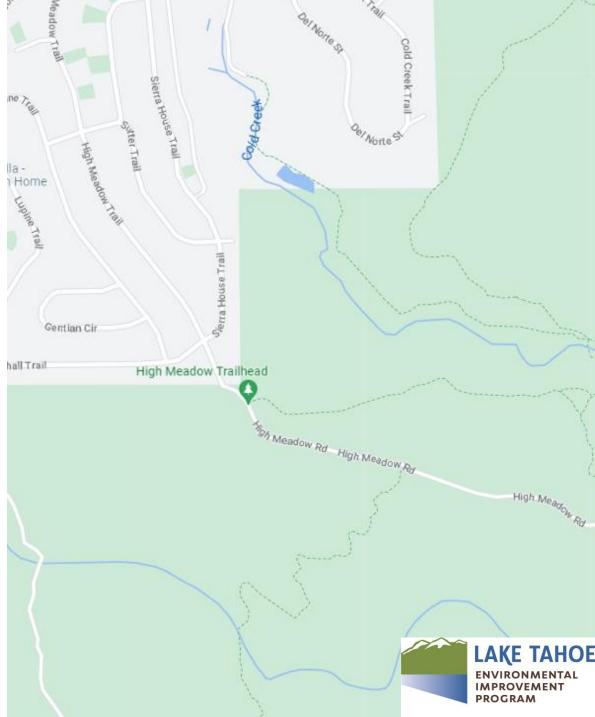

Project Spotlight: High Meadow Trailhead

- Create small parking lot to reduce parking in the neighborhood
- Agency partnership could create opportunity for improved summer and winter recreation access

Prioritization

- Projects prioritized in two buckets:
 - 0-5 years
 - 5-15 years
- Environmental Improvement Program (EIP) project list

Trail Recommendations

- Resources should be used to better maintain what exists, before building new trails and trailheads
- Communicate with proprietary trail websites (All Trails, Trailforks, etc.) to maintain accurate info
- Where feasible, the first mile of new trails should be accessible to further expand trail offerings for people with disabilities
- Provide dedicated parking spaces for people with disabilities and remove barriers to wheelchair access (gates, bollards, boulders, etc.)

Trail Recommendations

- Implement paid parking & reservation systems at high visitation locations
- Provide or expand transit access to major trailheads
- Provide priority access to trails for Indigenous peoples
- Prioritize safe crossing infrastructure when trails cross highways
- Improve wayfinding and signage for trailheads that are accessible from highways or in neighborhoods

Future Strategy Updates: Examine winter trail access; Decommission unsafe and unsustainable trails
