TRPA
Tahoe Regional
~~Protective~~ Agency.
~~Planning~~
~~That word in your~~
~~name really says~~
~~all "Protective"~~
name
t implies our good
lewardship of the
ke and its
rrounding areas.
This certainly
cludes poisons
e glyphosate (and
er synthetic types).
Ve know these
destroy plants, soil
biome and will be
into the waters as rain
comes.
The plants they
want to remove,
supposedly impact
pine tree growth,
while they actually
support and enhance
it in many ways.
Nature is smart,
it has what it needs,
what it doesn't need
is our harming it.
Let's prevent any
further harm.

"preserve
enhance
restore"

Labor could certainly
be found in
volunteers.

Thank you
Peggy Loomis

TRPA, You Have the Power to Protect our Forests, Lake Tahoe, Wildlife and our Community. Herbicides don't belong here!

Change the Code of Ordinances and prohibit conventional herbicide spraying in the Lake Tahoe Basin.

Independent scientists, federal courts, and international health agencies have all concluded the same thing: glyphosate is dangerous. Here are the facts.

$12B+ in Cancer Settlements Bayer has paid over $12 billion to settle roughly 180,000 lawsuits from individuals who developed cancer after using Roundup, with a new $18 billion settlement announced in early 2026.

93% Of Endangered Species: The EPA's own Biological Evaluation found that glyphosate is likely to adversely affect 93% of endangered species and modify 96% of critical habitats.

Retracted: In the Ghostwritten Safety Study, The Williams Paper — a key 2000 study cited to prove glyphosate's safety — was officially retracted in December 2025 after being exposed as ghostwritten by Monsanto employees.

66 of 70 US Streams Contaminated: A comprehensive USGS study detected glyphosate in 66 of 70 U.S. streams and rivers tested, showing the chemical's pervasive presence in American waterways. Will Contaminate Lake Tahoe's Pristine Water

Glyphosate doesn't stay where you spray it. USGS found it in 66 of 70 U.S. streams and rivers tested. 75,000 Potential Total Acres: Outraged citizens and environmental groups warn that total planned glyphosate spraying across the Tahoe Basin and surrounding areas could eventually reach up to 75,000 acres.

Glysophate destroys the Soil Microbiome That Forests Need to Recover and kills beneficial soil bacteria and mycorrhizal fungi that tree seedlings depend on to establish roots and absorb nutrients.

The 'Safety Science' Behind It Has Been Exposed as Fraudulent

Governing Board of Directors August 26, 2026
Director Regan
Shannon Friedman
Katt Macyntire
Steve Sweet

2020 thru 2023 for 3 years you told me "LTBMU's MOU was preventing you and your staff from enforcing Best Management Practices"
Aug.4 2023 after the YouTube publication of the years of violations that this bord, the trpa and ltbmu had ignored

LTBMU Legislative liaison Charles Clark
Forest Supervisor Erik Walker
LTBMUs contract manager, and tree of their hydrologists met with Myself, Sierra Club vice president, and president of Tahoe Clean Air.

Your environmental team:
Shannon Friedman
Katt MacIntyre
Steve Sweet Code enforcement
observed the blatant volitions
The kill zone for the third Creek fisheries spawn from the dam area to the mouth of Third creek was sent to this Governing Board, To the Staff and you
Julie Regan
You recently told me that it was you that sent your staff and encouraged that meeting. If so then why are you about to fall into the same embarrassing situation. With an MOU that may or may not be applicable, or respected regarding basin health.

At the time of that Incline Lake Dam removal summit summit your BMP codes enforcement manager Steve Sweet stood upon a hill of dirt where it cascaded into Third Creek and admonished the LTBMU and by default himself for not trusting LTBMU.

In disgust Erik Walker walked away from the living proof of his failure and the failure of his hydrologists to guide that project.

Glyphosates in the basin is déjà vu all over again.

Do not allow it do not hide behind some MOU as you did from 2020 to 2023 and allow another TRPA murder zone for the environment.
