

Errata Sheet – Summary of changes made to the September 29, 2016 Draft 2015 Threshold Evaluation Report to produce the Final 2015 Threshold Evaluation (November 30, 2016).

- Chapter 3: Updated graph and text on the Oxides of Nitrogen Emissions indicator sheet to use the latest California Air Resources Board (CARB) emission inventory (2013 Almanac). Data from the 2009 CARB Emissions Almanac were inadvertently included in the draft 2015 threshold evaluation released in September.
- Chapter 5: Amended recommendations included in the Stream Environmental Zone indicator sheet to include “restoration” in the list of ambiguous terms.
- Chapter 6: Updated graph on Late Seral and Old Growth Ecosystems indicator sheet, to ensure labels are visible.
- Chapter 7: Updated the graph and text on Lake Fish Habitat indicator sheet to reflect habitat that would be wetted between lake elevation 6,119- 6,229 (O’Neil-Dunne, Romsos, and Saah 2016). The correction reduced the estimated amount of prime fish habitat from 6,461 to 6,135, but did not alter the status determination.
- Chapter 12: Updated Implementation Chapter, “Table 12-6. Residential units accounting as of December 31, 2015” to update the residential bonus units allocated to the former North Stateline Community Plan (50 RBUs), into the California North Stateline Community Plan (13 RBUs) and Nevada North Stateline Community Plan (37 RBUs).
- Chapter 13: Expanded discussion of historic context and current science on carrying capacities.
- Added two appendices to the report: Appendix L and Appendix M.
- Typos, minor grammatical corrections, and reference updates were made throughout the report.
